Document Version: v3.0

1 Introduction

This specification sets out the standard and quality of as-constructed data to be submitted by the Contractor for all features forming the GIS Data Hub. The list of layers that is required to be captured is shown in Section 16.

2 Document Usage

This document is the property of LTA. Any enquiry should be directed to the Digitalisation unit, within the LTA Development & Building Control subgroup.

3 Document Updates

This document shall be reviewed on an annual basis or whenever there are major changes in the IM8 ICT&SS Management clauses.

4 Intended Audience

This procedure applies to all contractors/consultants/surveyors who collect data on road features forming the GIS Data Hub.

5 Document References

IM8 ICT&SS Management - Data

This specification shall be read in conjunction with the prevailing specification on As-Constructed Drawings and any other contract documents (if applicable).

Version of Specification 6

The Contractor shall check with the Authority for the latest version of the GIS Data Hub Data Collection Specification to be used before the commencement of actual work. The latest version of this specification is published at the LTA website at https://www.lta.gov.sg/content/ltagov/en/industry innovations/industry matters/development

construction_resources/street_works/requirements_for_street_work_proposals/gis_data_hub_c ollection.html

7 Responsibility

The Survey Consultant shall carry out the survey and collection of the field data and certify the correctness of the data to ensure that all requirements in this specification are strictly adhered to.

8 **Data Quality**

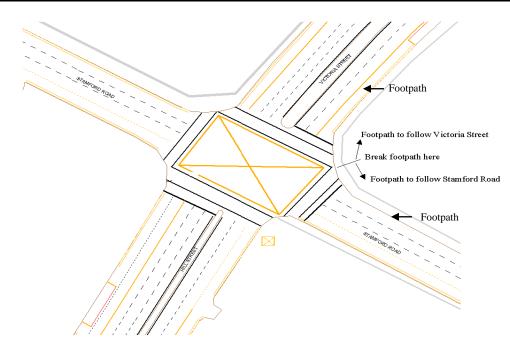

8.1 Accuracy

The data submitted shall be within the prescribed allowable tolerances as tabulated below:

Item		Description
Location Kerblines RTS lines RTS Stations		The features shall not have a co-ordinate error of more than \pm 0.03 metre on ground. The co-ordinates of the curved linear features shall be surveyed as near as possible and sufficient data to define the curve shall be presented to reflect their actual alignment or curvature.
		Linear features (except for kerbline) that span across different roads are to be captured as separate records ¹ .
	All other layers	The location shall be within \pm 0.5 metre on its relative position with reference to the sides of the road surveyed.
Linear Mea	asurement	All linear measurements (e.g. height, width) of inventories shall be within the accuracy of \pm 0.02 metre , unless otherwise stated in their individual inventory specification.
Bearing M	easurement	The bearings of the inventory items where orientation is required shall not deviate by more than $\pm 3^{\circ}$.
Error in da	ta	The total number of inaccurate or missing records in each inventory item submitted shall be within $\pm 1\%$ tolerance.

0 1 1 T.I

*Note*¹ - Please see illustration below

8.1.2 Topological Rules

Land Transport

Digitalisation Unit (DIGI)

🖉 Authority

The topology rules that apply to different layers are as listed below. The as-built data submitted must not violate these topological rules.

Layer Name	Topology rules
Detector loop	Must not overlap
Footpath	Must not overlap
	Must not self-intersect
Kerbline	Must not overlap
	Must not self-intersect
	Must not have dangles
Lane marking	Must not overlap
	Must not self-intersect
Pedestrian Overhead Bridge/ underpass	Must not overlap
RTS line	Must not overlap
	Must not self-intersect
	Must not have dangles
RTS Station	Must not overlap

8.2 Completeness

All mandatory attributes in each layer are to be updated. Please refer to Section 16 for the list of mandatory fields. Mandatory fields are those where "Allow Null" is set as No.

For mandatory fields where the information is not available on site (e.g. no number on lamp post or no number on control box etc.), update the value as "UNK" for string fields and "000" for numeric fields.

8.3 Consistency

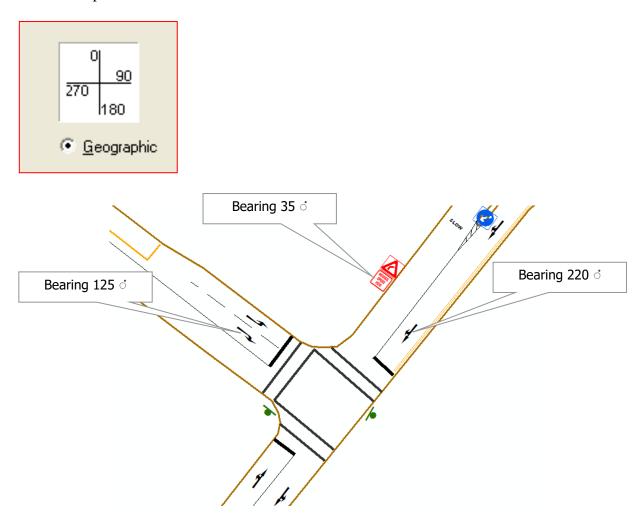

Data is consistent if it is represented in the same format or within the same value range, where the meaning of the valid values is the same for like data in all layers. Please refer to Section 16 for the list of valid values for the various GIS Data Hub layer fields.

8.4 Timelines

The as-built data shall be submitted within 2 months from the completion of the project.

9 Bearing Format

Some of the road inventory layers require bearings to be captured. The bearing of the inventory items should follow the geographical bearing obtained from survey measurement. Some examples are shown below:

10 Data Format & Conventions

The Road Inventory data shall be submitted in digital format.

10.1 Graphical Data

The data submitted shall comply with one of the following formats and shall be readable by the ESRI Arc GIS Version 10.8.1

- (a) ESRI Personal Geodatabase (mdb) format;
- (b) ESRI Shape (shp) file 2D format (this format may truncate the attribute field names to the first 10 characters of the field name)

10.2 Naming Convention

The data submitted shall follow the following directory/file structure if multiple files are submitted:

yyyymmdd	-	date of submission (directory)	eg. 20060901
XXXXXXXX	-	inventory type (directory)	eg. kerbline
уууууууу	-	version or release number (if any)	eg. V1.1

The name for the data files submitted (mdb/shp table names) must follow the layer names as listed in Section 16.

11 Spatial Parameters

All co-ordinates shall be based on the ISN (SVY 21) co-ordinates system used by the Singapore Land Authority.

All data submitted must have the following set of spatial parameters which is currently in use by the Singapore Land Authority. (These parameters are set in the sample personal geodatabase file (.mdb) or the sample shape file that will be provided by the Land Transport Authority.)

11.1 Horizontal Coordinate System

Projected coordinate system name: SVY21 Geographic coordinate system name: GCS_WGS_1984 Details Map Projection Name: Transverse Mercator Scale Factor at Central Meridian: 1.000000 Longitude of Central Meridian: 103.83333333333 Latitude of Projection Origin: 1.366666666666666667 False Easting: 28001.642000 False Northing: 38744.572000

11.2 Planar Coordinate Information

Planar Distance Units: meters Co-ordinate Encoding Method: coordinate pair Co-ordinate Representation Abscissa Resolution: 0.000026 Ordinate Resolution: 0.000026

11.3 Geodetic Model

Horizontal Datum Name: D_WGS_1984 Ellipsoid Name: WGS_1984 Semi-major Axis: 6378137.000000 Denominator of Flattening Ratio: 298.257224

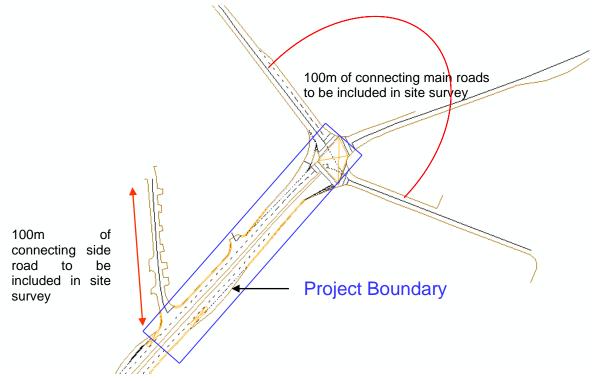

11.4 Altitude System Definition

Resolution: 1.00000 Encoding Method: Explicit elevation co-ordinate included with horizontal co-ordinates Bounding co-ordinates Horizontal In decimal degrees West: 103.621029 East: 104.021199 North: 1.468862 South: 1.260786 In projected or local co-ordinates Left: 4375.673403 Right: 48907.968763 Top: 50044.786795 Bottom: 27037.757530

12 Extent of Survey

When the stretch of road(s) being surveyed connects with other road(s) - either main or side roads, the survey shall include at least 100m of these connecting road(s).

When surveying localised works where there are **changes to kerbline**, e.g. pedestrian overhead bridge/underpass, bus shelter etc., the survey corridor shall include 100m from both side of the item being surveyed. If there is no change to kerbline, then 10m from both side of the item suffice. Additionally, the survey corridor shall include 100m from both side of the original item for re-location cases.

13 Supporting files

The LTA will provide the following supporting files to the survey consultant prior to the commencement of GIS Data Hub survey works:

- i. Symbology files (*.lyr) for personal geodatabase file and symbology files (*.lyr) for shape file in Arc GIS Version 9.3
- ii. Font files (*.ttf) containing road inventory symbols (these font files have to be installed in the font directory of the personal computer for proper display of the road inventory symbols)
- iii. Excel file (*.xls) containing Road Names and Road Codes to assist in filling up the information required for the new RD-CD field which is added to all the inventory layers.

14 Media of Submission

14.1 Softcopy Submission

The data is to be submitted in CD ROM. All media shall be digitally labelled with the Contract Number, Project Title and date of submission in yyyymmdd format.

14.2 Hardcopy Submission

The Contractor shall also submit three complete sets of the GIS SURVEY PLAN (hardcopy) at a scale of 1:500. Each inventory is to be represented using the correct symbology and in the correct orientation. A Reference scale of 1:1000 has to be set for correct representation of symbology. Please refer to the Part 2, Appendix – 19. Inventory Items and Symbol Representation. The symbology files mentioned in Section 13 shall be used for this purpose.

14.3 Video Submission

The Contractor shall also submit a colour video coverage reflecting the site conditions of the area being surveyed. The coverage extent is as specified in clause 12 of the Specification. All road inventory items surveyed shall be clearly picked up on the video. For example, traffic signs should be clear and legible.

The video captured should be submitted in VCD in either wave or mp3 format and indexed by road names. The date and time stamp of the video captured must be visible on playback. For two-way roads without central divider, separate videos should be submitted for each direction of traffic flow. For major roads/expressway where the carriageway is separated by a central divider, all inventory items on the divider must also be captured in the video.

15 Further Information

Training courses on Arc GIS are available from ESRI South Asia Pte Ltd. They are contactable at training@esrisa.com.

Training courses on GIS related surveys are available at GPS Lands (Singapore) Pte Ltd. They are contactable at enquiry@gpslands.com .

16 Data Specification

The details of the data to be submitted are as follows:

16.1 Arrow Marking (Point)

Description: A point representation of an arrow painted on the road surface to advice motorists on the direction of traffic flow.

Attribute Format:

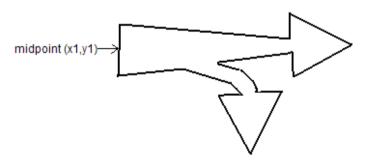

Field Name	Data Type	Size	Precisio n	Scal e	Allow Null	Value	Description	
TYP_CD	String	4	0	0	No	A, B, C, D, E, F, G, H, I, J, K, L, M, N, O	Please see Note 3	
BEARG_NUM	Doubl e	8	38	8	No	Bearing. Pleas	ase see Note 2	
LVL_NUM	NUM Short 2 4 0 No Level of		Level of road	d where feature exists				
						2	At-grade (ground level)	
							8	1st level depressed road
						9	1st level elevated road	
						7	2nd level depressed road	
						10	2nd level elevated road	
RD_CD	Text	6	0	0	No	Refer to list	Road Code (assigned to the Road Name) where feature exists	

Notes:

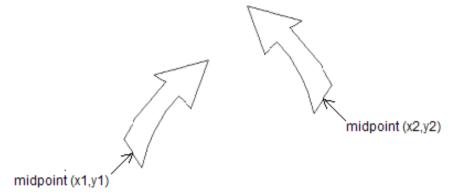

1) Arrow Marking co-ordinate is the midpoint at the base of the arrow in the direction of the traffic flow.

For example,

a) <u>Type C (straight / right turn shared arrow)</u>: one arrow only, hence only one point (x1, y1) required.

b) Types G (left converging arrow) & H (right converging arrow): two arrows, <u>hence two</u> points (x1, y1) and (x2, y2) are required.

2) The bearing should correspond with the bearing of each individual road. For example, if the bearing of the road is 97 degrees, then the bearing of arrow markings A is 97 degrees and the bearing of arrow markings B is 277 degrees respectively.

3)			
	Bearing for arro	ow marking 'A' is 97degrees	
		_ ~ ~ ~ ~ ~ ~	-
		(A)	~
			~
	$=$ $ \{$ $ B$		2
	Bearing for arrow marking 'B' is 277 degrees		
	5 5 5		 .

4) List of TYP_CD:

Type D (straight arrow)

 \checkmark

Type G (left converging arrow)

Type B (straight/left turn shared arrow)

> Type E (left turn arrow)

Type H (right converging arrow) _____

Type C (straight/right turn shared arrow)

Type F (left/right turn shared arrow)

Type I (straight/left/right turn shared arrow)

Type J (yellow coloured straight/right turn shared arrow)

Type M (part-time left turn arrow)

Type P (part-time straight/left shared arrow)

Type K (part-time straight/right shared arrow)

Type N (part-time

straight arrow)

Type Q (U-Turn Arrow)

★..

Type L (part -time right turn arrow)

- -

Type O (part-time left/right turn shared arrow)

16.2 Bicycle Rack (Point)

Description: A point representation of a stationary fixture to which a bicycle can be securely attached to prevent theft & for parking purposes.

Attribute Format:

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description
RACK_CNT	Short	2	0	0	No	No of rack	KS
TYP_CD	String	6	0	0	No	Type of tie	er
						D	Double
						S	Single
SHLTR_IND	String	1	0	0	Yes		ndicate whether Bicycle
						Rack is sh	heltered or not.
						Y	Yes
						N	No
RACK_DIM	String	25	0	0	Yes	Height an	d Width of the Rack
AGENCY_IMPL	String	6	0	0	No	Implemen	nting Agency
AGENCY_MAINT	String	6	0	0	No	Maintenar	nce Agency
BLDG_NAM	String	66	0	0	Yes	Building N	lame
LOCATION	String	500	0	0	Yes	Location of	of bicycle rack
POSTAL_CD	String	6	0	0	Yes	A unique	six-digit numeric code
						assigned	to each property
						address.	

Notes:

1. List of TYP_CD:

TYP_CD	Description	
D	Double	

16.3 Bollard (Point)

Description: A point representation of a strong thick post erected on streets to deter vehicles from passing through. It is also used as markers on road divider or as safety barriers along bus bay or side of roads.

Split arrow bollard is to be captured under 'TRAFFIC SIGN'.

Attribute Format:

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description
TYP_CD	String	4	0	0	No	Please s	see Note 3, 4
						С	Concrete
						D	Flexible Delineator Post
						F	Fibre Glass
						FP	Flexible Pole
						0	Others
						S	Steel
						SL	Spring Loaded Post
						Т	Safety
LVL_NUM	Short	2	4	0	No		of road where feature
						exists	
						2	At-grade (ground level)
						8	1st level depressed road
						9	1st level elevated road
						7	2nd level depressed
							road
						10	2nd level elevated road
RD_CD	Text	6	0	0	No	Refer to list	Road Code (assigned to the Road Name) where feature exists

Notes:

- 1. The co-ordinate shall be the centre point of the Bollards.
- 2. Bollards in a row are to be recorded individually.
- 3. If TYP_CD is not in the list, assign type 'O' (Others), and attach the photographs.
- 4. List of TYP_CD:

TYP_CD	Description	
C	Concrete	

Digitalisation		GIS Data Collection Specification
TYP_CD	Description

						7	2nd level depressed
							road

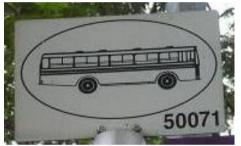

Digitalisation Unit (D	Digitalisation Unit (DIGI) GIS										
Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description				
						10	2nd level elevated road				
RD_CD	Text	6	0	0	No	Refer to list	Road Code (assigned to the Road Name) where feature exists				
LOC_DESC	Text	255	0	0	No	1	n Description as shown ous stop pole				

Notes:

1. The centre-line of the bus shelter along its length should be recorded.

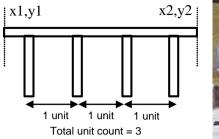

2. BUS_STOP_NUM - The five-digit bus stop identification number that is displayed on the bus stop pole e.g. 50071. To record A as 1, Z as 9, B as 2, Y as 8 etc if the identification number contains alphabets.

3. BUS_ROOF_NUM - B-Series number showed on the side of bus shelter roof e.g. B01.

- 4. If TYP_CD is not in the list, assign type 'O' (Others), and attach the photographs.
- The length of the BUS SHELTER is to be recorded as from (x1, y1) to (x2, y2) i.e. 5. the length of the roof. The number of units (UNIT_CNT) is illustrated below. If the no of units is not very obvious, the no of units should be derived by dividing the whole length of the bus shelter by 3 and rounding the result to the nearest whole no.

16.5 Bus Stop Pole (Point)

Description: A point representation of a pole to display the bus service numbers calling at the bus-stop.

Attribute Format:

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description
BUS_STOP_NUM	String	65	0	0	No	Please s	see Note 2
BUS_ROOF_NUM	String	10	0	0	No	Please s	see Note 3
STATUS	String	20	0	0	No	OP	OPERATIONAL
						NOP	NON-OPERATIONAL
SERVICE_TYPE	String	20	0	0	No	BA	BASIC (DAY)
						NB	NON BASIC (NIGHT)
						BO	BOTH (DAY&NIGHT)
						BT	BUS TERMINAL
						BI	BUS INTERCHANGE
						BD	BUS DEPOT
						NA	NIL
LVL_NUM	Short	2	4	0	No	Level c	of road where feature
						exists	
						2	At-grade (ground level)
						8	1st level depressed
							road
						9	1st level elevated road
						7	2nd level depressed
							road
						10	2nd level elevated
	-					D (road
RD_CD	Text	6	0	0	No	Refer	Road Code (assigned
						to list	to the Road Name) where feature exists
	Taxt	255	0	0	No	Lootier	
LOC_DESC	Text	255	0	0	No		Description as shown
						on the b	us stop pole

Notes:

1. Record the co-ordinate of the BUS STOP POLE.

 BUS_STOP_NUM - The five-digit bus stop identification number that is displayed on the bus stop pole eg.50071 or 27301 as shown on new design. To record A as 1, Z as 9, B as 2, Y as 8 etc if the identification number contains alphabets.

3. BUS_ROOF_NUM - B-Series Number showed on the side of bus shelter roof e.g. B01.____

- 4. SERVICE_TYPE
 - a) BASIC (Day)

This type of bus stop caters to services provided from 5.00am to 12.00midnight

b) NON-BASIC (Night)

This type of bus stop caters to services provided from 12.00 midnight to 4.30am

c) BOTH (Day & Night)

This type of bus stop caters to both day and night bus services

GIS Data Collection Specification

16.6 Control Box (Point)

Description: A point representation of a box containing electronic device to control traffic lights or street lighting. The Traffic Signal CONTROL BOX is found near signalised traffic junctions. Each traffic signal junction can have only ONE traffic signal control box. The collection of data covers only signalised junction, road crossing and street lighting control boxes. (Please refer to Note 1)

Attribute Format:

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description

TYP_CD	Description	
LB	Street Lighting	
OG	Over ground	
TS	Traffic Signal	

16.7 Convex Mirror (Point)

Description: A point representation of a mirror placed at street locations where visibility is poor.

Attribute Format:

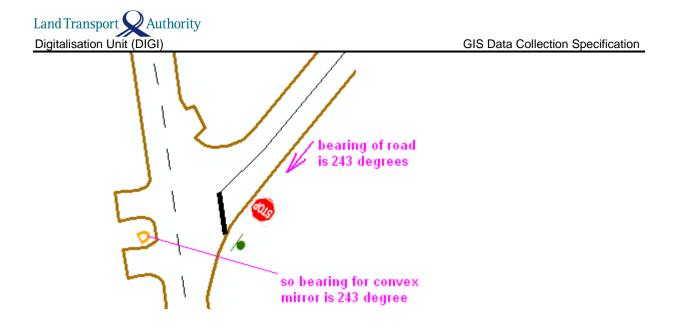

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description
BEARG_NUM	Double	8	38	8	No	Bearing.	Please see Note 2
LVL_NUM	Short	2	4	0	No		of road where feature
						exists	
						2	At-grade (ground level)
						8	1st level depressed
							road
						9	1st level elevated road
						7	2nd level depressed
							road
						10	2nd level elevated
							road
RD_CD	Text	6	0	0	No	Refer	Road Code (assigned
						to list	to the Road Name)
							where feature exists

Notes:

1. Record the co-ordinate of the pole on which the CONVEX MIRROR is mounted.

2. Bearing of convex mirror

16.8 Covered Linkway (Polygon)

Description: A polygon representation of a covered passage designated for pedestrian use to link up with other commuter facilities.

Attribute Format:

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description
DESIGN_TYP	String	6	0	0	No	Please I	Note 2
						1PF	Single Pole Flat Roof (Mono pitch)
						2PF	Double Pole Flat Roof (Mono pitch)
						1PP	Single Pole Double Pitch Roof
						2PP	Double Pole Double Pitch Roof
						1PC	Single Pole Curve Roof
						2PC	Double Pole Curve Roof
						X	Others
ROOF MATERIAL	String	4	0	0	No		Roof material
						Α	Aluminium
						Р	Polycarbonate
						Т	Tiles
						X	Others
WDT_CATG_CD	Short	2	4	0	No		s width of linkway roof
						1	< 2.4m
						2	2.4m
						3	>2.4m
HEIGHT	String	2	0	0	No	Indicate	s linkway height
						Н	High > 4.5m
						L	Low < 4.5m
LVL_NUM	Short	2	4	0	No	Level of exists	of road where feature
						2	At-grade (ground level)
						8	1st level depressed road
						9	1st level elevated road
						7	2nd level depressed road
						10	2nd level elevated road
RD_CD	Text	6	0	0	No	Refer to list	Road Code (assigned to the Road Name) where feature exists

Notes:

a) The COVERED LINKWAY shall be represented by a polygon outlining the structure as seen from aerial view. The outline shall correspond to the outer edge of the roof of the covered linkway, as shows on example below by points 1, 2, 3, 4, 5, 6, 7, 8 & 9.

b) List of TYP_CD

Type 1PF - Single pole flat roof

Type 2PF - Double pole flat roof

Type 1PP - Single pole double pitch roof

Type 2PP - Double pole double pitch roof

Type 1PC - Single pole curve roof

Type 2PC - Double pole curve roof

16.9 Cycling Marking (Point)

Description: A point representation a layer structure which will store both cycling path and bicycle crossing marking information; to differentiate which markings belongs to which category (i.e. Cycling Path Marking or Bicycle Crossing Marking).

Attribute Format:

Field Name	Data Type	Siz e	Precisio n	Scal e	Allo w	Value	Description		
CYL_PATH_ CD	String	6	0	0	Null No		cle path code that uniquely identifies cling path name.

						10	2nd level elevated road
RD_CD	Text	6	0	0	No	Refer	Road Code (assigned to
						to list	the Road Name) where
							feature exists

Notes:

TYP_CD	Description	
В	Bus Detector Loop For detecting buses along bus lanes. They are always 10m in length. Collection rules are the same as that for Strategic Loop.	

Land Transport Authority

Digitalisation Unit (DIGI)

Digitalisation	Unit (DIGI)	GIS Data Collection Specification
TYP_CD	Description	
R	Red Light Camera For each of the detector loop rectangles shown below, coordinates of points P1, P2, P3 and P4 are to be recorded as vertices of the polygon.	Red Light Camera See Inset A Direction of flow Inset A P1 P2 P4 P3 Red Light Camera
S	Strategic Loop For monitoring speed and number of vehicles passing within a lane. The illustration below depicts two types of strategic loop. Each type is to be recorded as shown in the inset, where coordinates of points P1, P2, P3 and P4 are to be recorded as the vertices of the polygon.	See Inset A See Inset B Direction of flow P1 P2 P2 P3 P2 P3 P2 P3

16.15 Emergency Gate (Point)

Description: A point representation of a gate found along an expressway to be used during an emergency. The co-ordinate of EMERGENCY GATE is to be recorded at the centre point of the Gate.

Attribute Format:

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description
LVL_NUM	Short	2	4	0	No	Level of	road where feature exists
						2	At-grade (ground level)
						8	1st level depressed road

A1	Yellow	These yellow lines are used along normal bus lanes to indicate a break for use by other turning vehicles.	1m x int 1m x 0.1m	

Digitalisa	ation Unit (D	PIGI)		GIS Data Collection Specification
TYP_ CD	Colour	Description		
A2	White	These white lines are used to indicate the edge of the carriageway adjacent to auxiliary lanes. E.g. exclusive right/left turn lanes at acceleration/ deceleration lanes along expressways. It is also known as speed change lane marking.	1m x int 1m x 0.2m	
A3	Yellow	These broken yellow lines are used to guide drivers emerging from the side road to keep away from the leftmost traffic lane, which is a normal bus lane. It gives the road users advance warning and provides clearer guidance to motorists of normal bus lane ahead.	1m x int 1m x 0.3m	
A4	White	These broken white lines are used to demarcate signalised pedestrian crossing lines.	0.2m x int 0.3m x 0.2m	

	ation Unit (C			GIS Data Collection Specification
TYP_ CD	Colour	Description		
A5	White	These broken white lines are used for guiding motorist across a wide / skewed junction.	1m x int 3m x 0.1m	
A6	Yellow & Red	These yellow and red lines are used along full day bus lane to indicate a break for use by other turning vehicles.	Yellow 1m x int 1m x 0.1m Red 1m x int 1m x 0.15m	
A7	Yellow & Red	These broken yellow and red lines are used to guide drivers emerging from the side road, to keep away from the left- most traffic lane, which is a full day bus lane. It gives the road users advance warning and provides clearer guidance to motorists of full day bus lane ahead.	Yellow 1m x int 1m x 0.3m Red 1m x int 1m x 0.15m	

	Digitalisation Unit (DIGI) GIS Data Collection Specification					
TYP_ CD	Colour	Description				
A8	White	These broken white lines are used to demarcate signalised bicycle crossing lines.	0.4m x int 0.4m x 0.4m			
В	White	These white lines are used as lane marking between lanes at other roads & tunnels.	2m x int 4m x 0.1m			
B1	White	These white lines are used as lane marking between lanes on expressway only.	2m x int 10m x 0.1m			

	ation Unit (I			GIS Data Collection Specification
TYP_ CD	Colour	Description		
B2	White	Broader Alignment Lane Marking (BALM). It can be implemented on both expressways & arterial roads.	2m x int 4m x 0.25m	terms bolies
С	White	These white lines are used as lane markings at light controlled intersection and along the approaches at/before the stop line. (Generally 7 to 10 marks are painted).	4m x int 2m x 0.1m	
C1	White	These white lines are used as lane markings to serve as edgeline to guide vehicles away from the kerb (generally 7 to 10 marks are painted).	4m x int 2m x 0.2m	MARINE PARADE ROAD

TSTOP	Taxi Stop - Taxi stop only allows taxis to perform immediate pick-up and drop-off of passengers, and no waiting at all times.	
TPD	Taxi Pick-up/Drop Off - Pick-up/Drop-off point allows taxis including private vehicles to perform immediate pick- up and drop-off of passengers.	
TSTAND	Taxi Stand - Taxi stand allows taxis to wait at the facility up to the maximum number of allocated bays reflected on site.	

16.37 Traffic Sign (Point)

Description: A point representation of the traffic sign that help to regulate, warn, guide or inform all road users. Split arrow BOLLARD is to be captured under TRAFFIC SIGN.

Attribute Format:

Field Name	Data Type	Size	Precisio n	Scal e	Allow Null	Value	Description	
TYP_CD	String	4	0	0	No	Please r Type coo	efer to Section 17 for the	
BEARG_NUM	Doubl e	8	38	8	No	Bearing	of the traffic sign. ee Note 4.	
SGNBD_HT_NU M	Doubl e	8	8	3	Yes		rd height d for non- standard Signs

							on the same pole, wall	
LVL_NUM	Short	2	4	0	No	Level of	road where feature exists	
						2	At-grade (ground level)	
						8	1st level depressed road	
						9	1st level elevated road	
						7	2nd level depressed road	
						10	2nd level elevated road	
RD_CD	Text	6	0	0	No	Refer	Road Code (assigned to	
						to list	the Road Name) where	
							feature exists	
CATG_CD	Long	4	10	0	no		/ of Traffic Signs, Please	
						see Not	e 6 below	

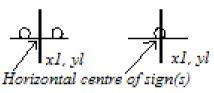

Notes:

1. If traffic sign description does not match any sign in the list, enter 'O###', where ### is a running serial number that uniquely identifies a particular non-standard traffic sign within the survey. Attach a photograph of the traffic sign.

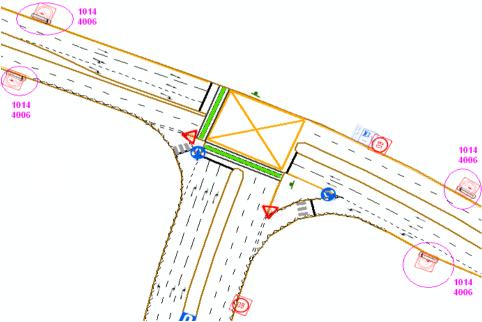

- Land Transport Authority Digitalisation Unit (DIGI) 2. If multiple TRAFFIC SIGNS exist of
 - If multiple TRAFFIC SIGNS exist on the same pole, record each sign separately and place each sign vertically along the direction of the flow of traffic to avoid overlapping of signs when traffic sign symbols are applied at a reference scale of 1:1000. Please see picture shown below.

3. The co-ordinate of TRAFFIC SIGN should be captured at the horizontal centre of the sign(s).

4. The bearing should follow the flow of traffic except for pedestrian crossing prohibition (1014) and directional arrow (4006) signs. Their orientation are as shown in diagram below:

GIS Data Collection Specification

5. The words on the reverse of the pedestrian crossing prohibition need not be captured. Please see illustration below:

1014 Pedestrian crossing prohibition 4028 Directional arrow (double headed)

1014 Pedestrian crossing prohibition 4006 Directional arrow (single headed)

wording on reversed side no need to be captured

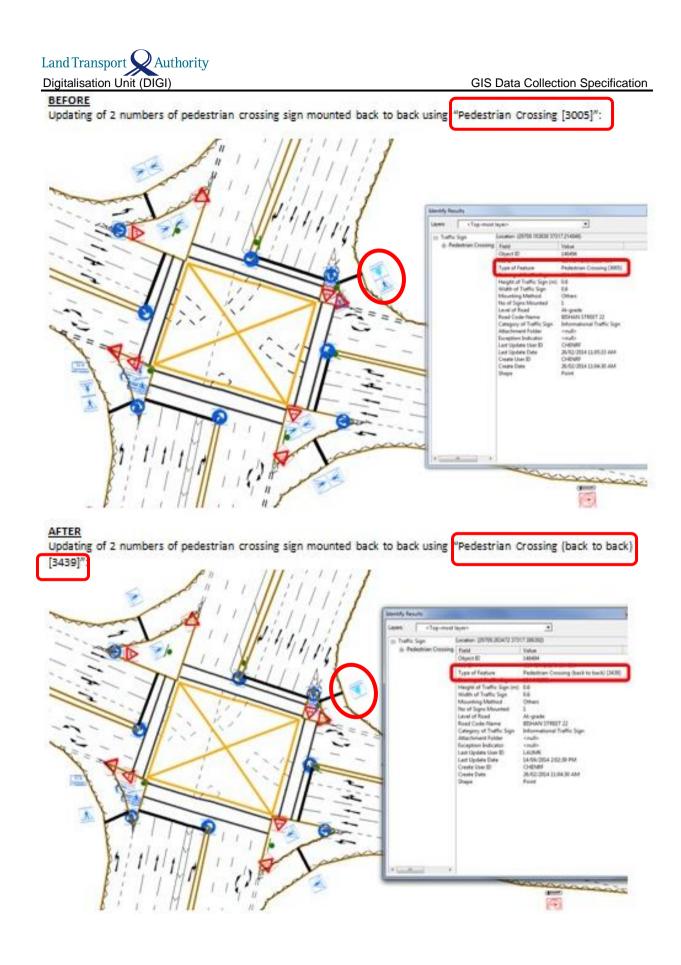

6. Category of Traffic Signs:

1001 to 1999 - Prohibitory Traffic Sign 2001 to 2999 - Warning Traffic Sign 3001 to 3999 - Information Traffic Sign 4001 to 4999 - Supplementary Traffic Sign 5001 to 5999 - Mandatory Traffic Sign 6001 to 6999 - Street Traffic Sign 7001 to 7999 - Cycling Sign 9001 to 9299 - Flyover Traffic Sign 9300 to 9399 - Tunnel Traffic Sign 9400 to 9499 - Underpass Traffic Sign 9500 to 9599 - Viaduct Traffic Sign

7. Pedestrian Crossing back to back sign:

Before: User will need to update **2 numbers of single sided "Pedestrian Crossing [3005]**" traffic sign back to back.

After: User will only need to update **1 number of double sided (back to back) "Pedestrian Crossing (back to back) [3439]"** traffic sign. The new "Pedestrian Crossing (back to back) [3439]" help to ease the congestion in the plan layout.

16.38 Traffic Signal Aspect (Point)

Description: A point representation of lights consisting of signal aspects to control traffic flow. If multiple TRAFFIC SIGNAL LIGHTS occur on the same pole, record each set of traffic signal lights separately.

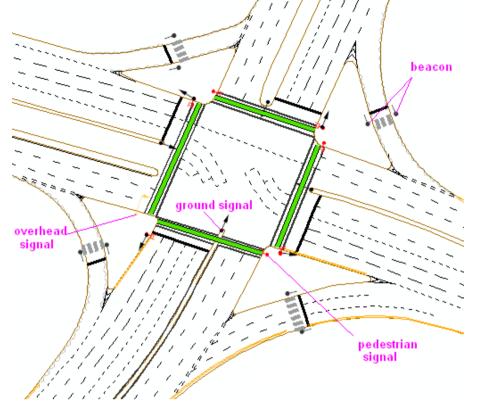

Field Name	Data Type	Siz e	Precision	Scal e	Allow Null	Value	Description
TYP_CD	String	4	0	0	No	Pleases	see Note 2

16.40 Word Marking (Point)

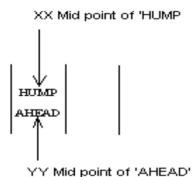

Description: A point representation of a word painted on the road surface to give motorists advance information on approaching facilities or traffic related devices. WORD MARKING within all Roads is to be captured.

Attribute Format:

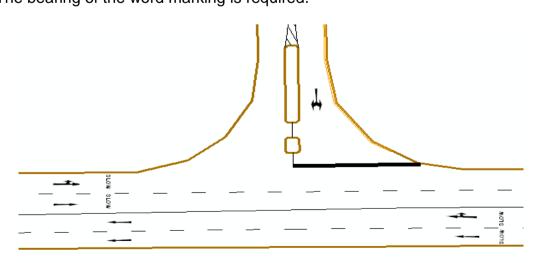

Field Name	Data	Siz	Precisio	Scale	Allow	Value	Description
	Туре	е	n		Null		
DESC_TXT	String	15	0	0	No	Record	the word (text) of the marking in
						the desc	ription field.
						Please s	see Note 2
BEARG_NU	Double	8	38	8	No	Bearing.	Please see Note 2
M							
LVL_NUM	Short	2	4	0	No	Level of	road where feature exists
						2	At-grade (ground level)
						8	1st level depressed road
						9	1st level elevated road
						7 2nd level depressed road	
						10	2nd level elevated road
RD_CD	Text	6	0	0	No	Refer	Road Code (assigned to the
						to list	Road Name) where feature
							exists

Notes:

1. Word Marking location is the mid-point of the word marked. E.g. HUMP AHEAD, two separate POINT records, xx and yy are to be captured.

2. The bearing of the word marking is required.
