

LAND TRANSPORT ITM 2025

A sustainable land transport sector with a future-ready workforce and a vibrant ecosystem.

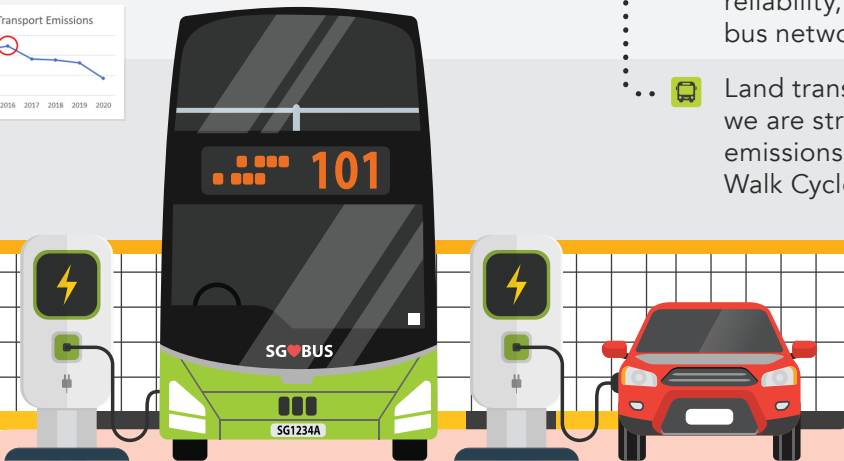

A A Future-Ready Workforce

- Upskill rail workers to use new and emerging technologies such as data and statistical analytics
- Upskill bus captains and technicians progressively to handle electric buses

B A Sustainable and Resilient Land Transport Sector

- Expanding the rail system and improving rail reliability, supported by an extensive public bus network and active mobility options
- Land transport emissions peaked in 2016 and we are striving towards further reduction in emissions through encouraging commuters to Walk Cycle Ride and vehicular electrification

C A Reliable and Cost-effective Transport System through Innovation & Technology

- Drive innovation across the land transport system through democratising data
- Co-create innovative solutions to enhance operational processes as well as for environmental sustainability
