

About Amazon Web Services

AWS helps local and regional governments innovate by simplifying IT workloads that governments struggle with and depend on every day, such as Geographical Information Systems (GIS), Content Management Systems (CMS), Open Data portals, and more. All of these applications run on AWS, making it easier for governments to deliver services to their citizens.

About City on a Cloud Innovation Challenge

The City on a Cloud Innovation Challenge is a global program that recognises local and regional governments and technology partners that are innovating for the benefit of citizens using the AWS Cloud. From healthcare to utilities and from transit to city planning, local and regional governments, the award recognises public sector agencies that embrace innovation for their citizens' benefit.
