

Be Device-Safe Visual for 2024

Charging devices with non-original parts can

DESTROY HOMES AND LIVES

Based on investigations, 3 in 5 active mobility devices that caught fire were found to have non-original parts or charged using non-original power adaptors.

Protect yourself and your loved ones with these steps:

Maintain your device in its original state, i.e. no third party parts installed

Charge your device only with the original power adaptor carrying Enterprise Singapore's Safety Mark

Dispose of your device if it has non-original parts

These fires have caused severe damage to homes, injuries, and even deaths.

Learn more with the **Be Device-Safe info pack**. Read case studies and find helpful guidelines including how to recognise if your device has non-original parts.
